

# J&E Computers

## Repair & Troubleshooting

If your computer doesn't turn on any more or things don't work the way they should, I am here to help. I will find what needs to be fixed and do it fast and economically

## Virus & Spyware Removal

Viruses are tricky and dangerous! Most viruses are more than just annoying and often lead to identity theft. If your PC has pop-ups, is running very slowly all of a sudden, or you are getting warning messages, let me check it out for you. I'll not only remove the virus, but will make sure you are secured to keep it from happening again.

## Preventative Maintenance

Like a car your computer needs routine maintenance. Use my services to keep your computer running efficiently, and stop problems before disaster strikes. Or, let me help you choose the right solution for your data backup. Nothing is worse than losing precious memories, pictures, e-mails and financial data collected over the years.

For more information on any of our products or services please visit us on the Web at:

I started J&E Computers for 2 reasons. First, my old company downsized and I lost my job - I needed a way to feed my family! Secondly, while there are a lot of computer repair companies out there, almost none of them care about giving personalized care to you and your computer needs.

Computers are so much more than just a piece of technology that sit in our homes. They are a life link to friends and family, they are a gateway to entertainment and information, and more and more they are the way that we store our memories, finances and other pieces of our lives. So many companies treat them and you like a number, just another part of the business. "Let's get the work done charge the money and get onto the next one." When we depend on our computers for almost every aspect of our lives this isn't good enough.

You need to have your computer set up and working for you, not just working, or you working on it. That is what I am to do. I want you be able to turn on your computer, do the things you enjoy and not have to threaten the computer with violence if it doesn't do what you want. That is why I offer most of my services right in your home. How will the Tech at the Big Box Store know that your computer is in the cabinet next to your desk with a printer, camera, and scanner plugged in, and that you have another computer and tablet that use your wireless? While these things may not seem to be important to your specific problem, they often are. And by having me on site to look at the problems I am able to see the big picture and fix not only the issue you called about but can make suggestions to make your technology work for you.

If you are experiencing viruses, errors, slowness, or things just aren't working I can fix it. If you are ready to upgrade, or need help setting up and learning a recent purchase I can help.
